Chapter 1

INSTALLATION

1

UNPACKING

Open the carton and check each item in the box against Figure 1-1 to make sure that you have everything (there should be five items).

Figure 1-1. Check to make sure you have all five items: 1) Sheet feeder, 2) Hopper attachment, 3) Stacker attachment, 4) Printer cover, and 5) User's manual.

Note: Please retain the box and packaging materials in case you need to transport the Automatic Sheet Feeder.

MOUNTING THE AUTOMATIC SHEET FEEDER

1. Hold the metal hopper attachment as shown in Figure 1-2, and insert it firmly into the fixing holes on the top part of the hopper support.

Figure 1-2. Insert the hopper attachment.

2. After you've inserted the hopper attachment, insert the stacker attachment, squeezing it with your hand, into the fixing groove in the front part of the main body as shown in Figure 1-3.

Figure 1-3. Insert the stacker attachment.

- 3. Check that printer power is OFF. Then remove both the printer cover and the paper guide from the printer.
- 4. Move the release lever at the back of the printer to the down position as shown in Figure 1-4.
- 5. Move the bail lever on top of the printer forward to open the paper bail.
- $\overline{2}$

Figure 1-4. Move the release lever and the bail lever to mount the Automatic Sheet Feeder.

6. Secure the mounting brackets of the Automatic Sheet Feeder onto the shaft of the platen by lowering it into position as shown in Figure 1-5.

Figure 1-5. Mount the Automatic Sheet Feeder onto the printer.

7. Confirm that the mounting brackets on both sides of the Automatic Sheet Feeder are correctly engaged on the printer. When they are engaged correctly, the ejection roller can be rotated by turning the platen knob.

Figure 1-6. Confirm that the Automatic Sheet Feeder is set correctly.

- Install the printer cover provided with the Automatic Sheet Feeder. 8.
- Notes: 1. Please keep the original printer cover in a safe place. 2. To remove the Automatic Sheet Feeder, carry out the above installation procedures in reverse.

OPERATION

LOADING THE PAPER

1. Pull the paper loading lever forward to bring the pressure plate back into position with a clicking sound as shown in Figure 2-1.

Figure 2-1. Pull the paper loading lever forward.

- 2. Align the left paper guide position with the triangle seal on the side of the stacker.
- 3. Fan the paper before loading as shown in Figure 2-2, and line up the edges of the paper evenly.

Figure 2-2. Fan the paper before loading.

- 4. Load the paper, aligning it with the left side hopper, then sliding the right hopper into position. Do not set it too tightly, so as to allow the paper to be transported smoothly between the hoppers.
- 5. After loading the paper into the hopper, press the paper loading lever backward. The paper will be set into position between the hoppers and the hopper roller.

Figure 2-3. After loading the paper, press the paper loading lever backward.

Note: When you are not going to use the printer again for some time, or at the end of the day's operation, be sure to remove any paper in the printer. Paper left in the printer may become deformed by the platen.

OPERATION OF CONTROL CODES

When the paper-out detector is enabled by setting the DIP switch, the following control codes will be changed as shown below:

- 1. < FF > (Form Feed) This command sets the paper into the printer. It ejects any paper set in the printer when the Automatic Sheet Feeder is empty.
- 2. $\langle LF \rangle$ (Line Feed)

If a line feed operation results in going over the page length, the next sheet of paper is fed in to the printer.

- 3. <VT> (Vertical Tab) This command functions as a line feed operation.
- 4. Vertical tab position setting command This command is ignored.
- 5. Page length setting command The page length setting is ignored, and is set to the paper size in actual use.

When the paper-out detector is disabled by setting the DIP switch, the control codes will be function normally.

Chapter 3

MAINTENANCE

MAINTENANCE

The Automatic Sheet Feeder is designed to withstand long use with high reliability. We ask users to regularly remove any dirt or dust from the Automatic Sheet Feeder, first removing it from the printer. The platen of the printer mechanism and roller in particular should be kept clean.

MALFUNCTIONS

Malfunctions may be resolved by simple inspection, so please check the following items:

Symptom	Cause	Remedy
Automatic Sheet Feeder does not operate	 Not in Automatic Sheet Feeder mode Paper stacked incorrectly Platen & feeder not operating together 	 Set DIP switch correctly Set paper correctly Check Automatic Sheet Feeder mounting
Paper does not feed into printer	 Out of paper Paper jammed Paper loading lever forward 	 Load paper Remove jammed paper Press paper loading lever backward
More than 2 sheets transported	 Paper not fanned properly Incorrect paper specifications 	 Load paper after fanning well Use paper suitable to Automatic Sheet Feeder specifications

Symptom	Cause	Remedy
Paper is crooked	 Poor paper Too much horizontal movement of paper so that guide rollers of the Automatic Sheet Feeder do not take up the paper correctly. 	 Use new paper Check position of the paper guide
Malfunction of paper ejection	 Full stacker (the part which stores the printed paper) Paper does not match Automatic Sheet Feeder specifications. 	 Empty stacker Use paper suitable to Automatic Sheet Feeder specifications.

If the Automatic Sheet Feeder still does not operate correctly after carrying out these simple checks, consult your dealer.
